

# Power vs. Number of Nodes for Different W with 95% CI (Cov\_Sign = Pos)

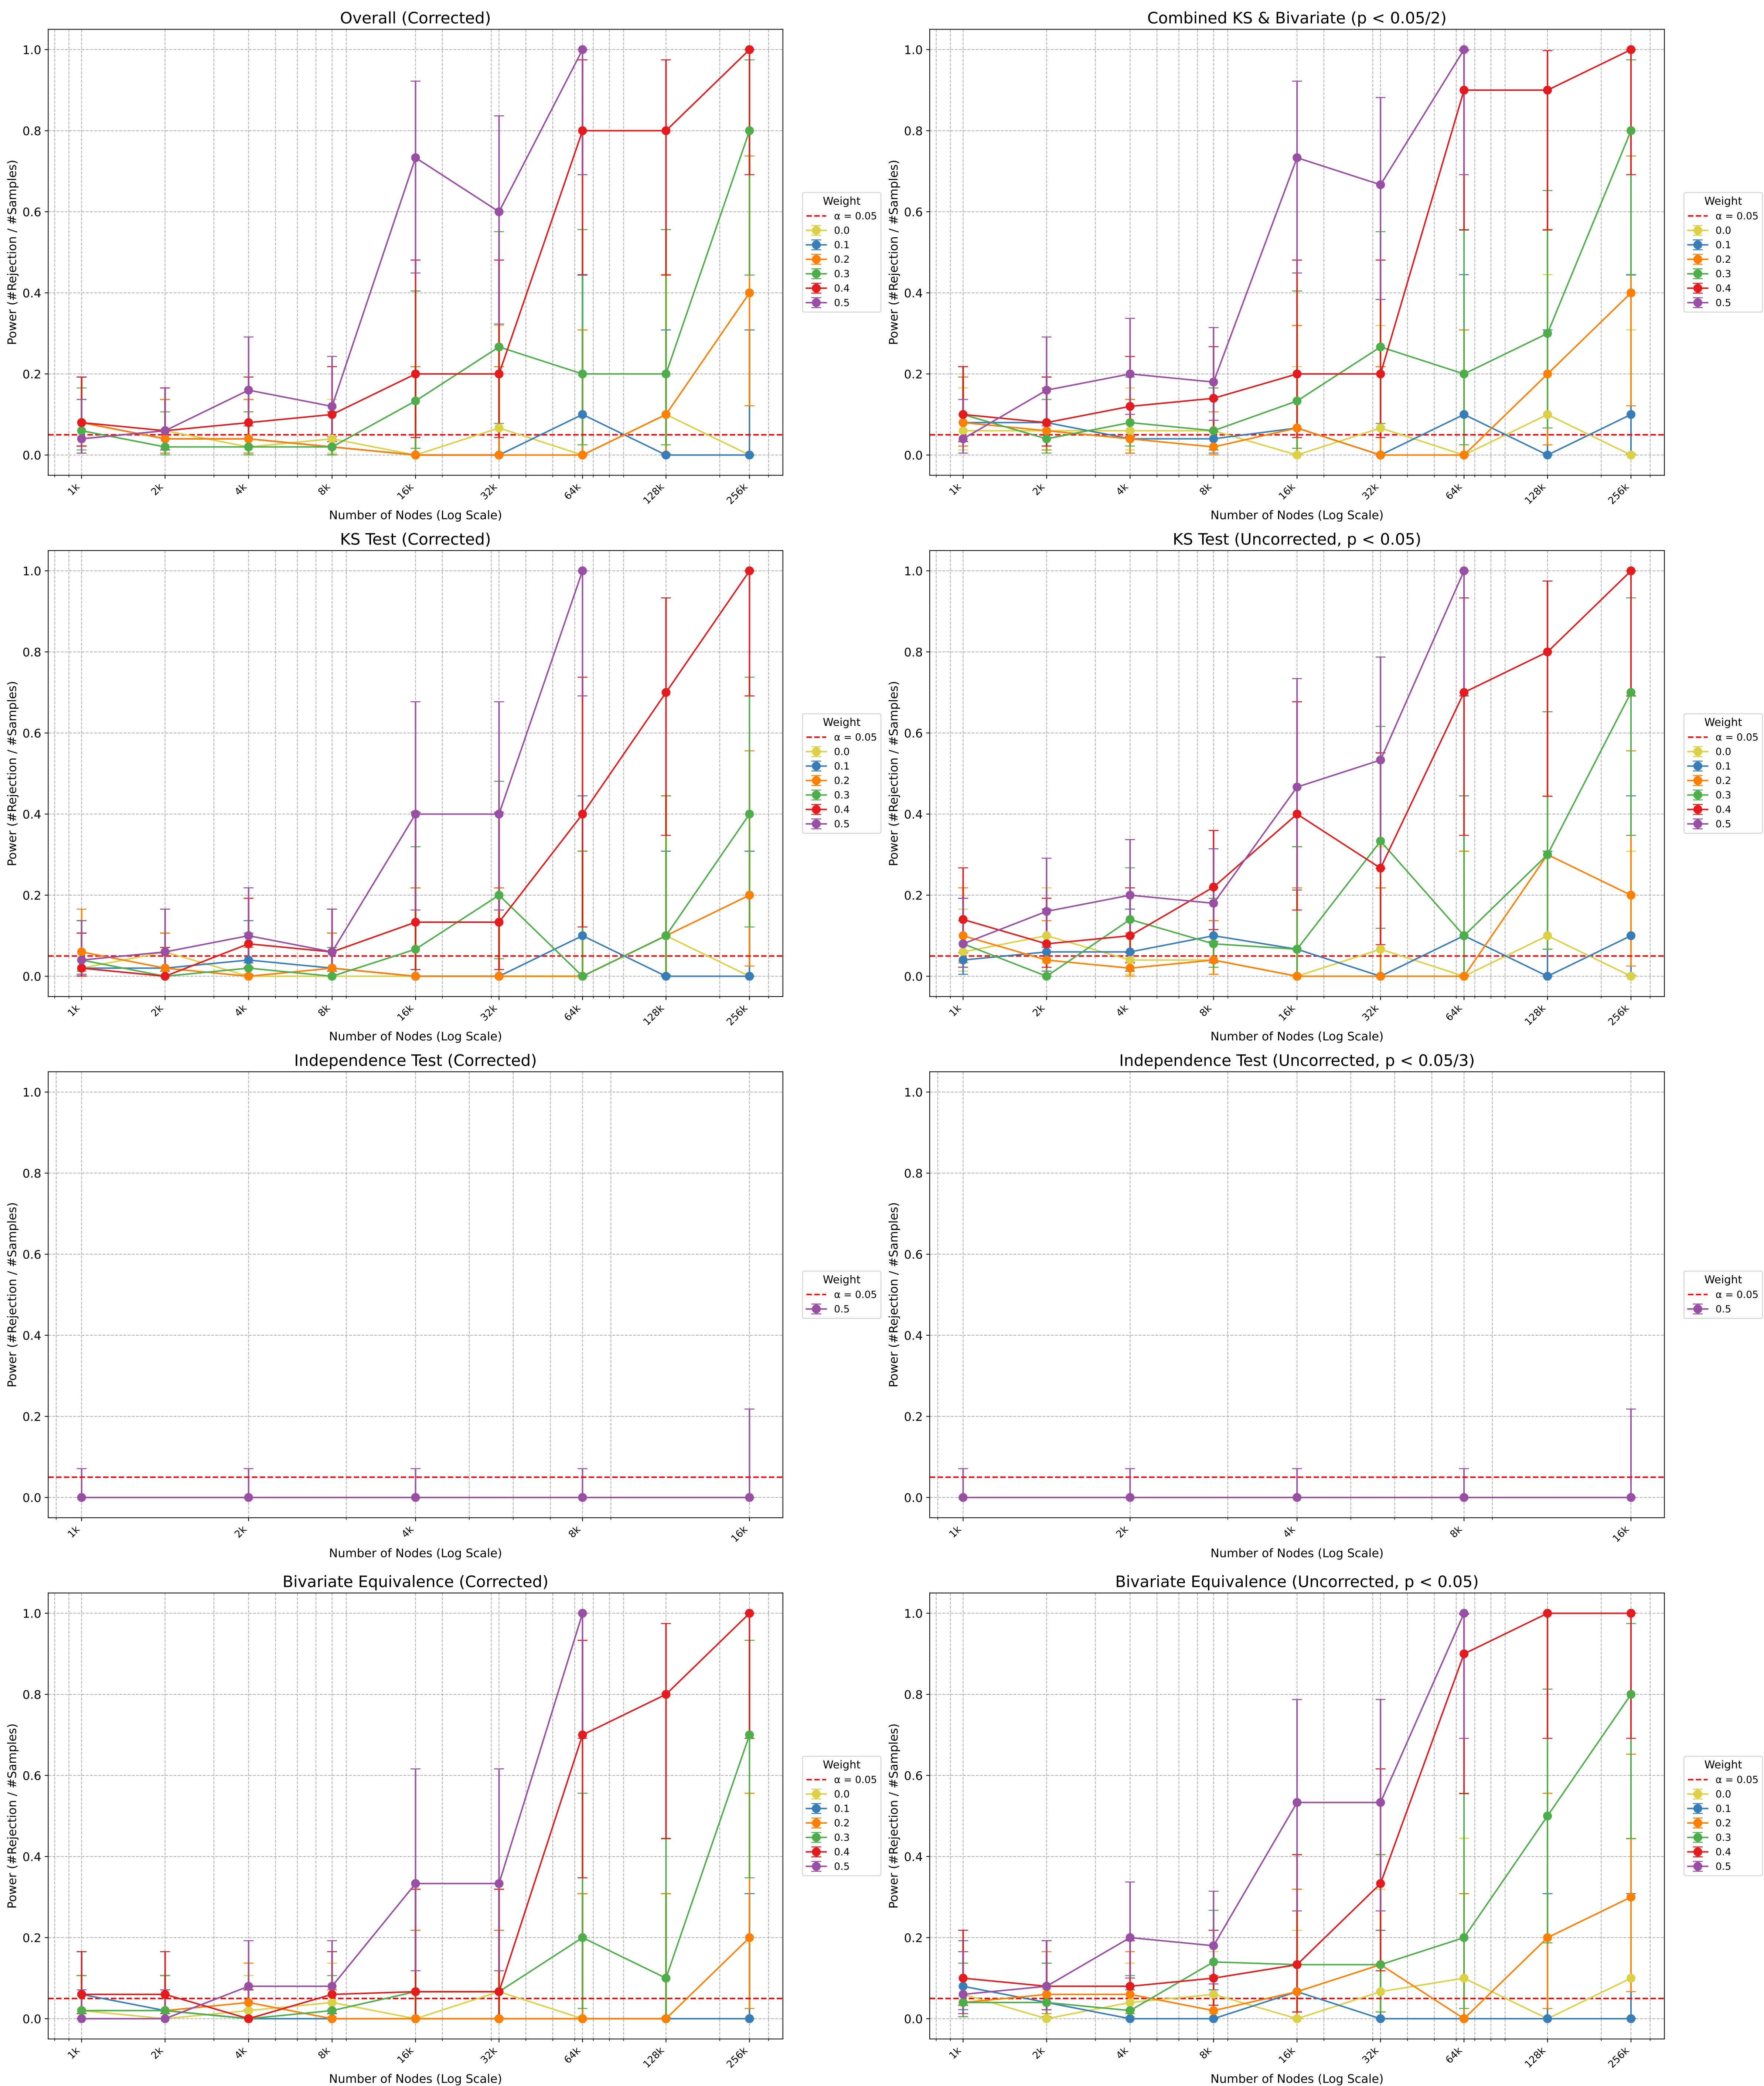

Figure 6: This line chart illustrates the relationship between the number of nodes and the statistical power of the hypothesis test, categorized by different  $W$ . A larger value of  $W$  is associated with greater test power.

\*Flows are all generated by the same setting: Distance = 5, Cov sign = Pos, K = 13, Beta = 0.7, Graph = SmallWorld.  
 #Classification: Top 25% Edge Degree & Top 25% Edge betweenness to class1; Bottom 25% Edge Degree & Bottom 25% Edge betweenness to class2.
