

Power vs. Number of Nodes for Different W with 95% CI (Cov_Sign = Pos)

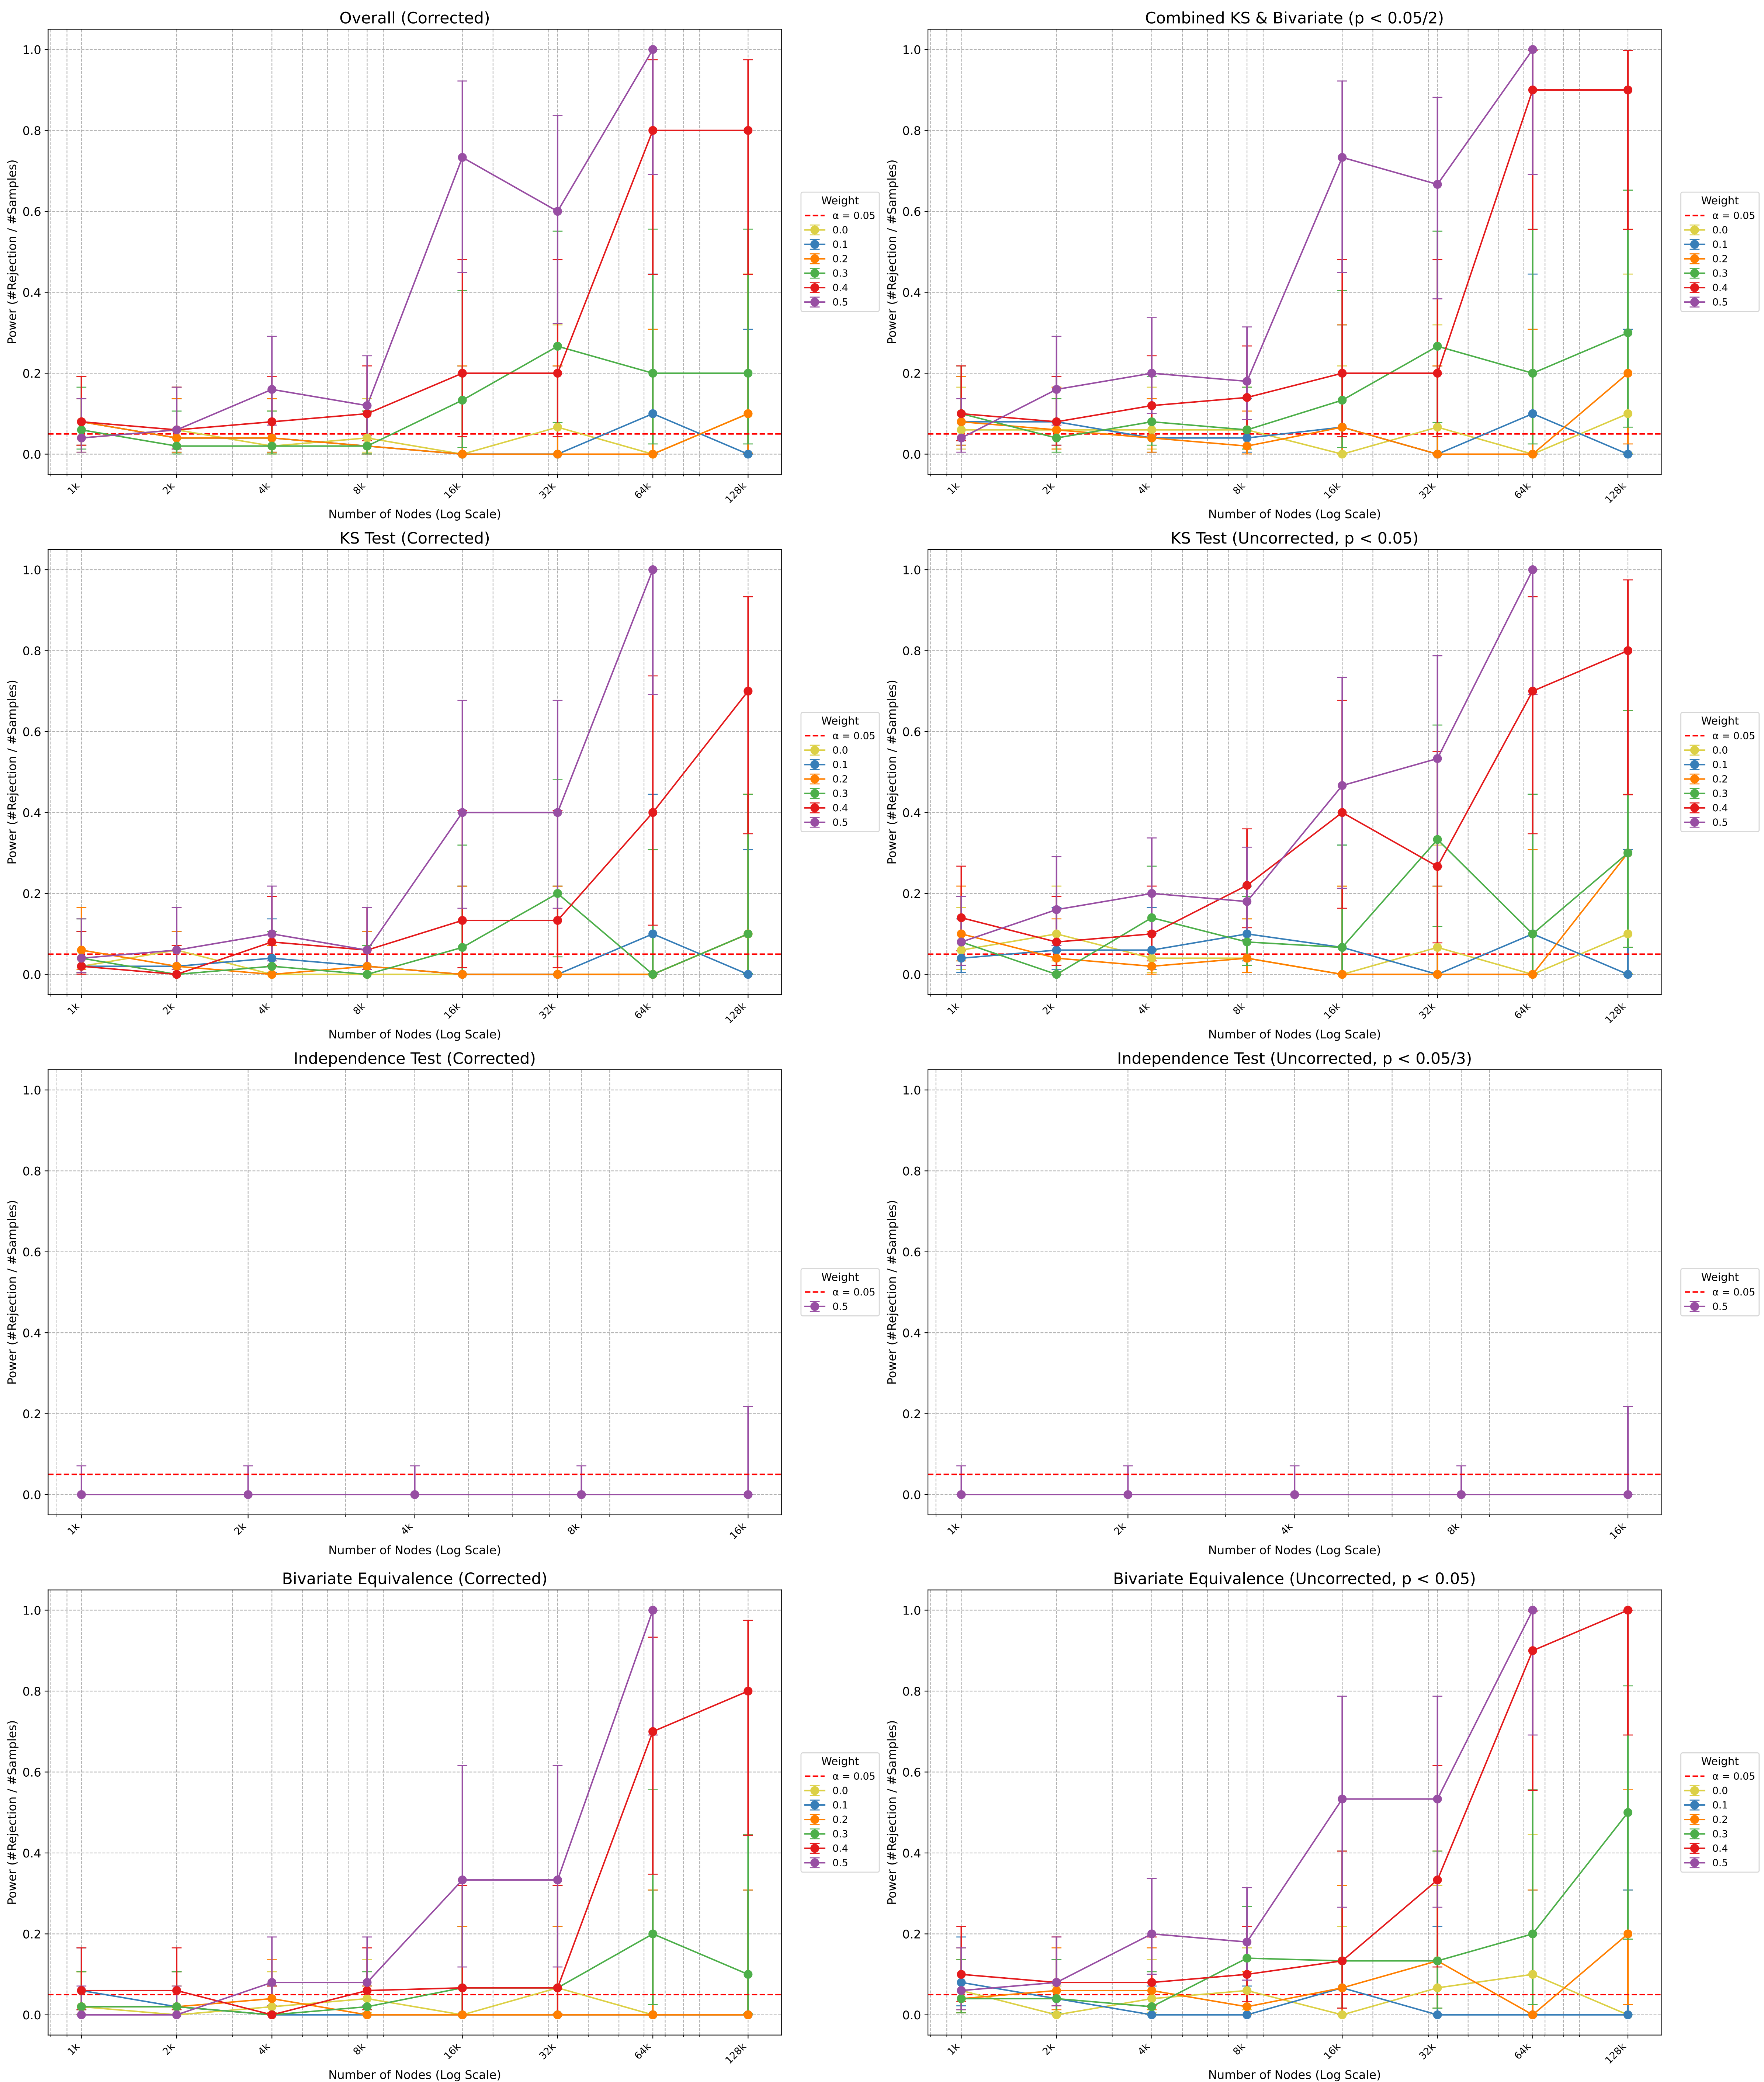

Figure 6: This line chart illustrates the relationship between the number of nodes and the statistical power of the hypothesis test, categorized by different W. A larger value of W is associated with greater test power.

*Flows are all generated by the same setting: Distance = 5, Cov. sign = Pos, K = 13, Beta = 0.7, Graph = SmallWorld.
#Classification: Top 25% Edge Degree & Top 25% Edge betweenness to class1; Bottom 25% Edge Degree & Bottom 25% Edge betweenness to class2.
