

Power vs. Number of Nodes for Different Dmin with 95% CI (Cov_Sign = Pos)

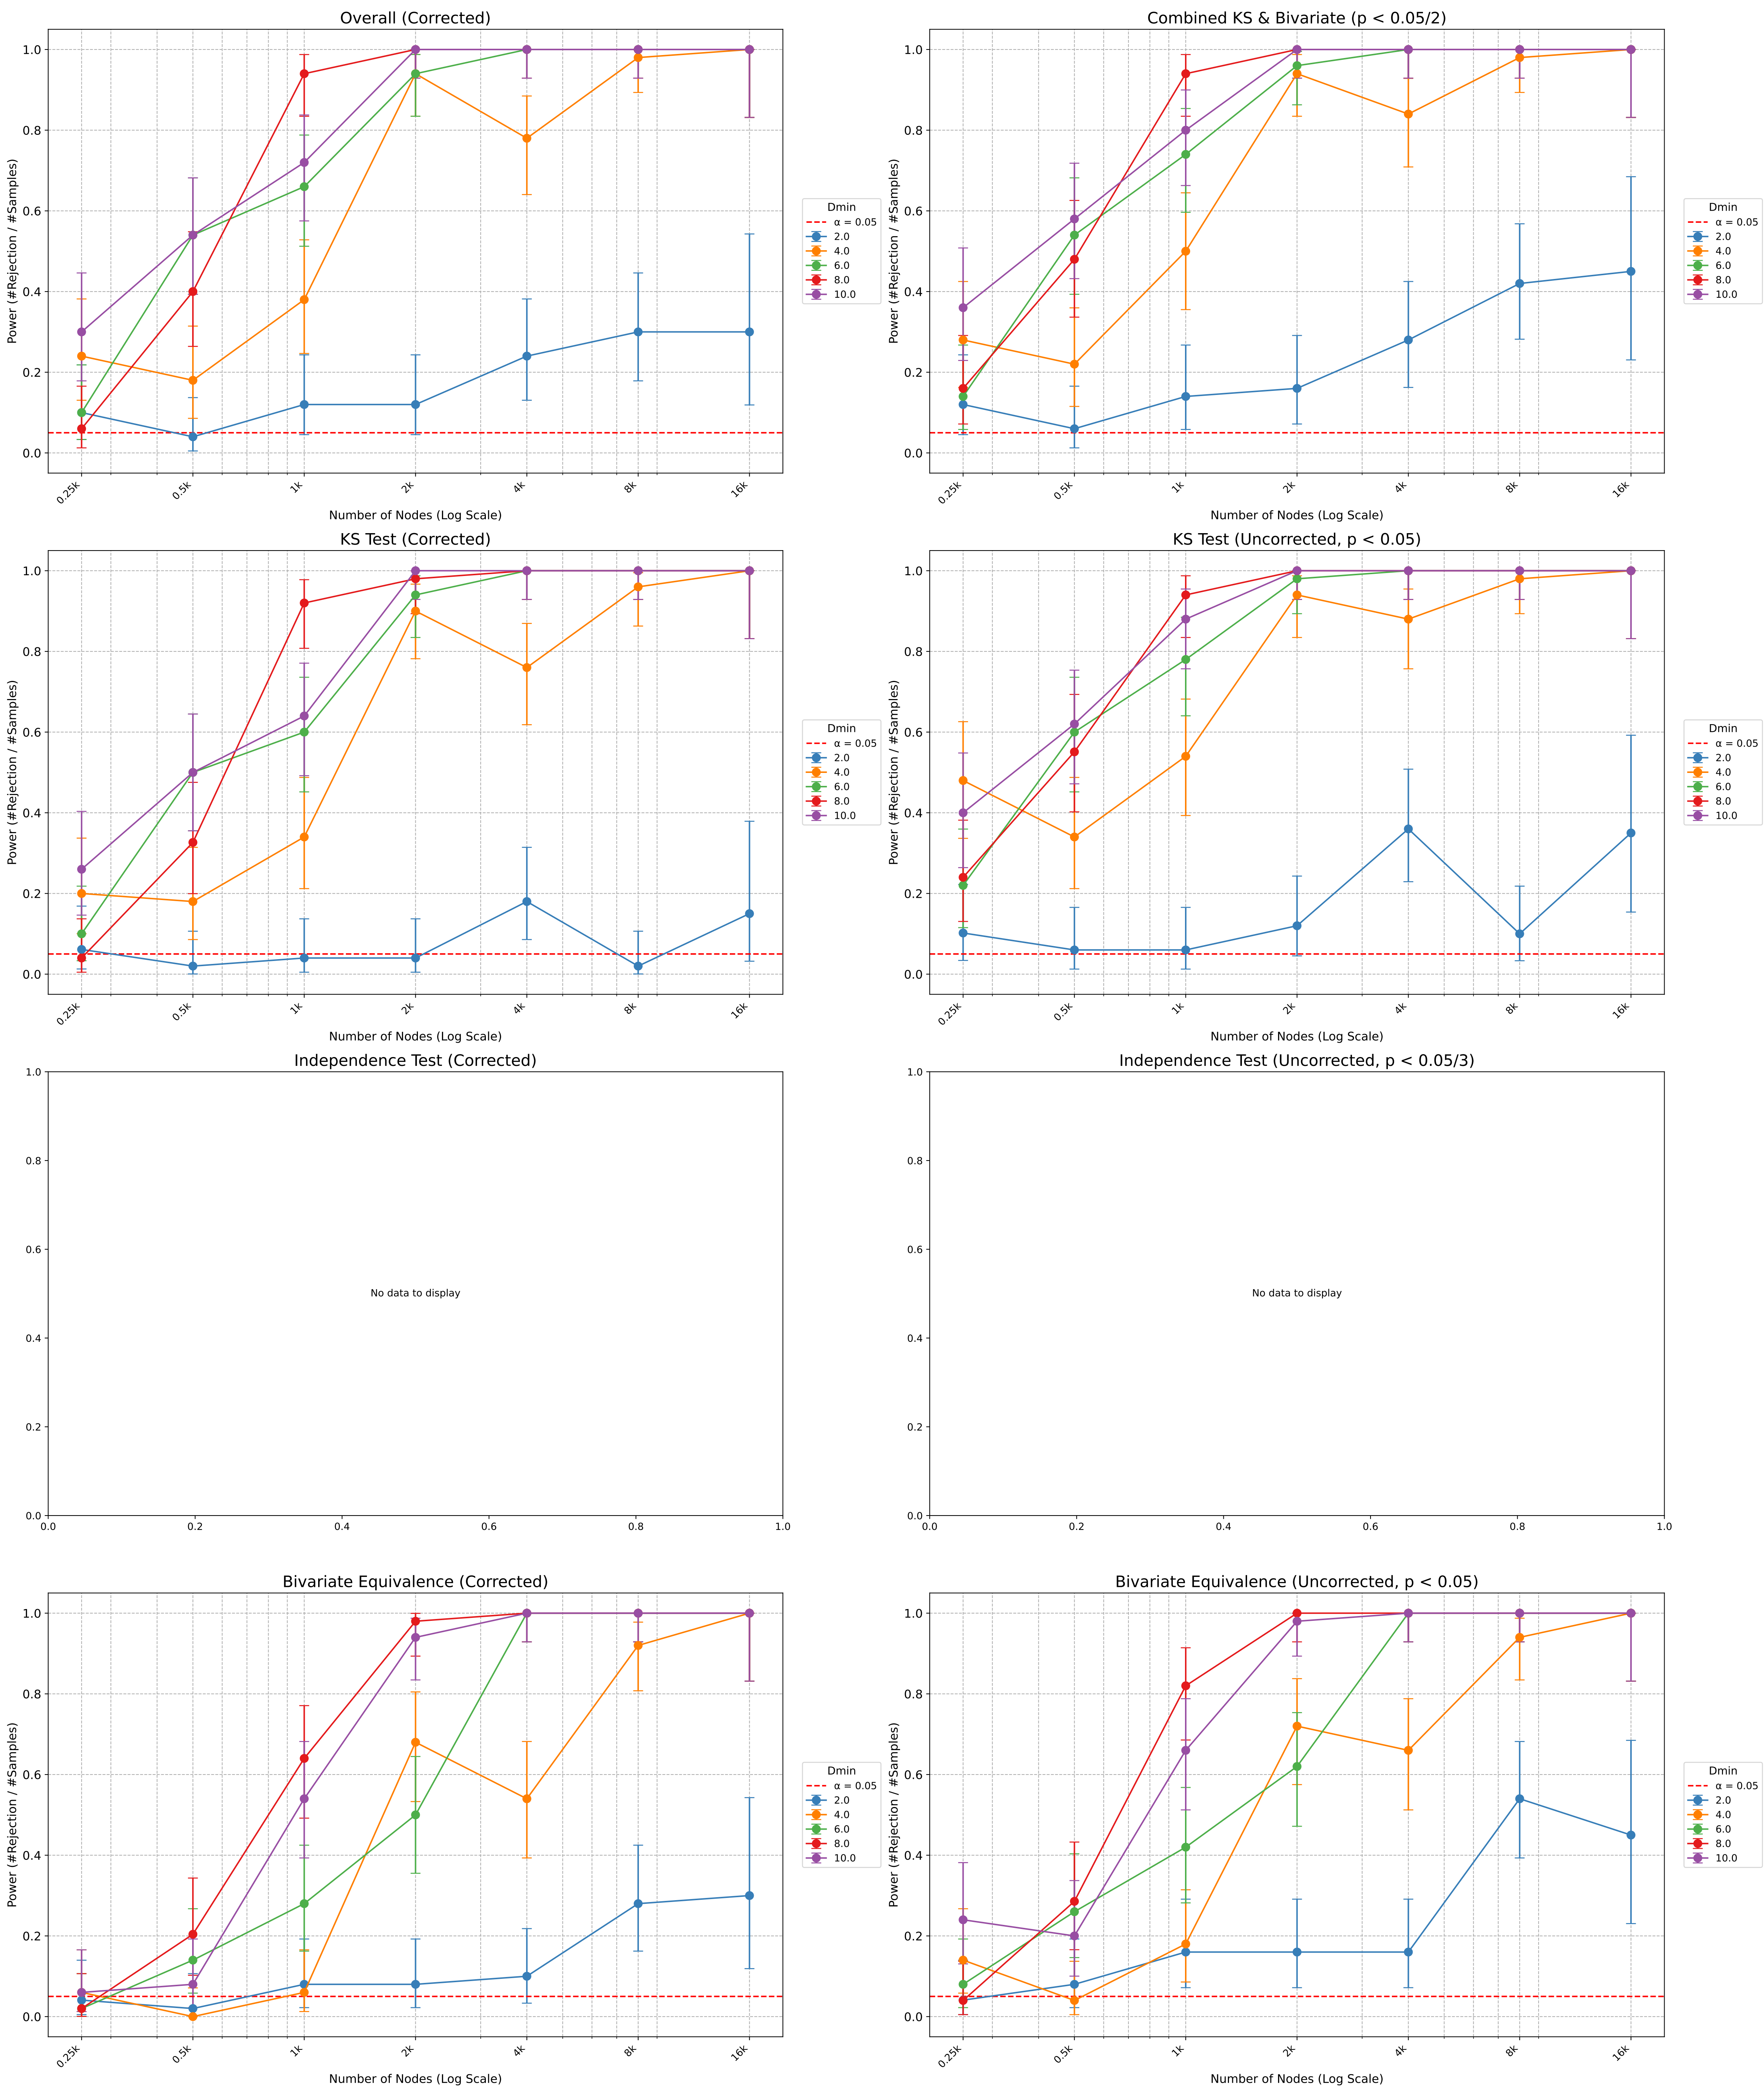

Figure 12: This line chart illustrates the relationship between the number of nodes and the statistical power of the hypothesis test, categorized by different D_{min} .
 *Flows are all generated by the same setting: Distance = 5, Cov sign = Pos, Rho = 0.5, AB ratio = 15, Graph = ScaleFree.
 #Classification: Top 25% Edge Degree to class1; Bottom 25% Edge Degree to class2.
